

2 Loops Tail Extension

1. Find your desired length by going up or down on the tail bone so that the tail extension is at the proper distance from the ground where it will not be stepped on. At that point on the tail bone make three 6 inch braids straight across from one another and as thick as the loops on top of the tail extension.
2. Pull right braid through right loop on tail extension from the outside of the loop to the middle. Pull left braid through left loop from the outside to the middle. Use the middle braid as your 3rd braid and braid them tightly together so they hold tail extension against the tail bone.
3. Pull the braid back between the 2 loops on the tail extension so the braid is now on the back side of the tail extension. To help take the strain off the loops, lift up the tail extension and put matching color electrical tape around the rubber top and the braid.
